Calibration Markdown Report

```
# Calibration report – run `run_001`, camera `realsense`  
  
- Base directory: `/root/ur_ws_sim/data`  
- Run directory : `/root/ur_ws_sim/data/run_001`  
  
---  
  
## 1. Camera intrinsics  
  
- Calibration file: `/root/ur_ws_sim/data/run_001/calib/CameraParams_realsense.npz`  
- Number of images used: **98**  
- Image resolution: **1280 x 720**  
- Chessboard inner corners (nx x ny): **7 x 10**  
- Chessboard square size: **0.024000 m**  
- RMS reprojection error: **0.192799 px**  
- Per-image mean reprojection error: min=0.1090, mean=0.1575, max=0.2373 px  
  
Camera matrix K:  
  
[[ 919.18559339  0.          649.55459405]  
 [ 0.          920.90454306  365.54467847]  
 [ 0.          0.          1.          ]]  
---  
  
Distortion coefficients:  
  
[[ 1.11659574e-01  8.12637857e-03  7.44873124e-04 -1.59891864e-03  
 -7.89971697e-01]]  
---  
  
---  
  
## 2. PnP board poses (board in camera frame)  
  
- PnP file: `/root/ur_ws_sim/data/run_001/calib/poses_realsense.npz`  
- Number of images with successful PnP: **98**  
- Board distance from camera (min/mean/max): **0.390 / 0.559 / 0.625 m**  
  
Example poses (first up to 3 images):  
  
**Image:** `img_0000_pose_0000.png`
```

```

- t (board in camera) [m] = [-0.0016, 0.1433, 0.5908]
- rvec (Rodrigues) [rad] = [0.2766, 0.0480, -3.0640]

**Image:** `img_0001_pose_0001.png`

- t (board in camera) [m] = [-0.0012, 0.1430, 0.5887]
- rvec (Rodrigues) [rad] = [0.2717, 0.0156, -3.0665]

**Image:** `img_0002_pose_0002.png`

- t (board in camera) [m] = [-0.0008, 0.1428, 0.5853]
- rvec (Rodrigues) [rad] = [0.2569, -0.0160, -3.0691]

```
3. Hand-eye calibration

- Hand-eye file: `/root/ur_ws_sim/data/run_001/calib/handeye_realsense.npz`
- Method: **Tsai**
- Number of samples used: **98**

3.1 Camera in EE frame (T_{cam}^{ee})

Rotation matrix R_{cam2ee} :

```
[[ 0.9941614   0.03865706   0.10074097]
 [-0.04107452  0.99891312   0.02203331]
 [-0.09977974 -0.02604255   0.99466868]]
```

Translation t_{cam2ee} [m]: [0.1024, -0.0784, 0.0439]

RPY (deg, ZYX convention) ≈ roll=-1.50, pitch=5.73, yaw=-2.37

Homogeneous transform T_{cam2ee} :

```
array([[ 0.9941614 ,  0.03865706,  0.10074097,  0.10243068],
       [-0.04107452,  0.99891312,  0.02203331, -0.07842157],
       [-0.09977974, -0.02604255,  0.99466868,  0.04386567],
       [ 0.          ,  0.          ,  0.          ,  1.          ]])
```

```

```
3.2 Camera in BASE frame (T_{base}^{cam} , averaged)

Homogeneous transform $T_{base2cam}$:
```
array([[-0.03868316, -0.99891242,  0.02603064,  1.09752458],
       [-0.99415935,  0.04109951,  0.09978987,  0.14687683],
       [-0.10075118, -0.02201842, -0.99466798,  1.45043942],
       [ 0.          ,  0.          ,  0.          ,  1.          ]])
```

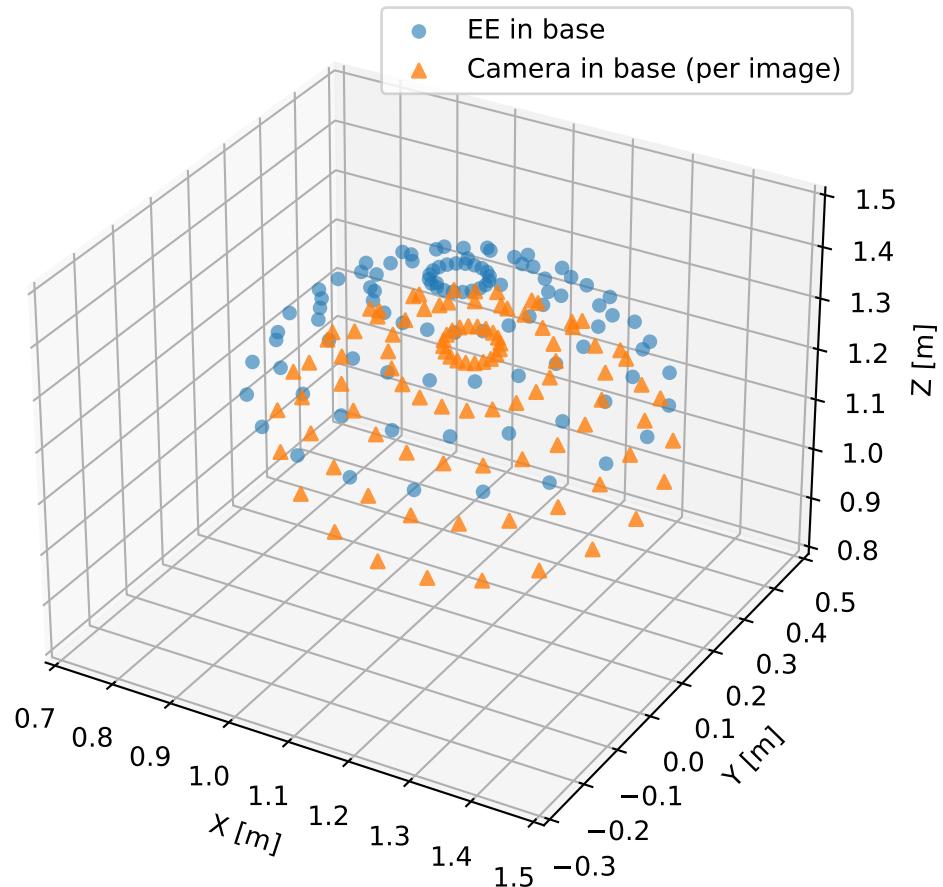

Translation base \rightarrow camera [m]: [1.0975, 0.1469, 1.4504]

RPY (deg, ZYX convention) \approx roll=-178.73, pitch=5.78, yaw=-92.23

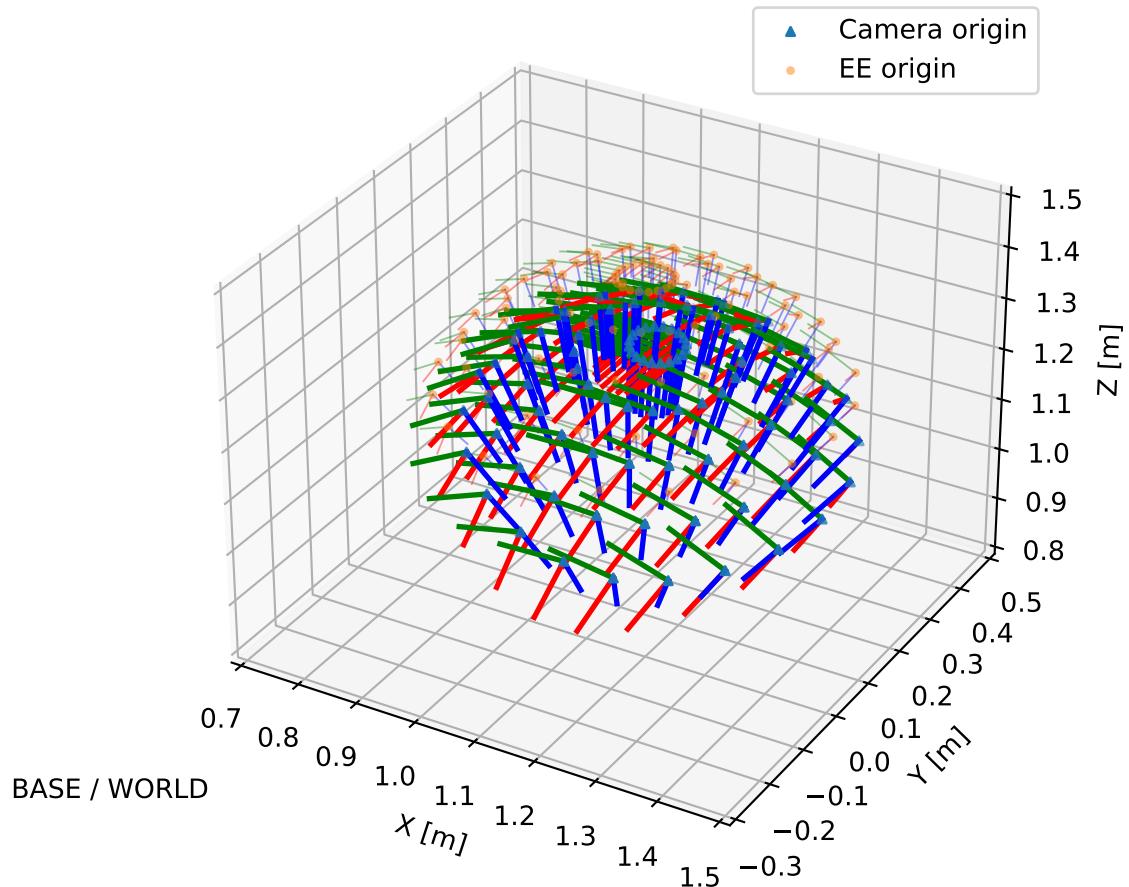

Homogeneous transform $T_{cam2base}$ (inverse of $T_{base2cam}$):
```
array([[-0.03868316, -0.99415935, -0.10075118,  0.33460817],
       [-0.99891242,  0.04109951, -0.02201842,  1.12223076],
       [ 0.02603064,  0.09978987, -0.99466798,  1.39947956],
       [ 0.          ,  0.          ,  0.          ,  1.          ]])
```

This report was auto-generated. Graphs and plots are available in the PDF:
